

## High Voltage, Flexible, Electric Vehicle Bus Bar

Does your cable shape up?

Let us solve your battery and capacitor conductor routing and space problems.

**Quality** is our number one concern so each completed unit is dimensionally checked and hi-pot tested before shipping.

**Simplicity** is key. One piece construction eliminates the possibility of failure due to crimped connections. Installations are quick and easy with the ability to bend & route around the battery.

**Economical** - Reduced costs compared to solid bus bars & cables

**Safety** - Reduce hazard to personnel with our insulated, protective sleeve covering

**Reliability** - Reduce flashovers & short circuits that damage equipment

**Functional** - Reduces volume of battery pack and BDU
